

Adding Points from the Cogo Buffer to a Survey Fieldbook

When adding points to the InRoads Survey fieldbook you have three choices Computed, Fixed, and Geometry.

- **Computed** – point is defined from measured distances and angles.
- **Fixed** – point is defined from keyed in values for Northing, Easting, and Elevation.
- **Geometry** – point is defined from the Cogo buffer point name.

Code	Name	Value

1. From the **Fieldbook Data** dialog **right click** and select **Add After** the Add Observation dialog will appear.
2. Change the drop down box to **From Geometry**
3. In the **Point Name** key-in field type a **Cogo Point** number from the active geometry project.
4. Tab key out of the field. The Northing, Easting, and Elevation will automatically fill the dialog with the correct data from the Cogo Point.
